ORDERING AND FULFILLMENT SYSTEM

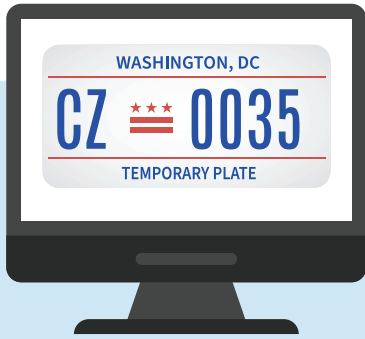

Ordering and Fulfillment System

RELYCO has a fully integrated system to streamline the ordering process. We have integrated our system multiple times with other customers, and it is fully integrated with our e-commerce platform. This system has real-time inventory numbers and tracking as a standard feature. We are currently managing multimillion dollars in inventory daily and shipping over 18,000 unique shipments per year. This integration allows for robust management of dealer accounts, where each state vehicle dealer's location can order temporary plates electronically. Dealer numbers and permissions are managed within our platform, ensuring that access is regulated according to DOT's specifications.

Real-Time Reporting and Tracking

Our platform provides real-time updates and comprehensive reporting capabilities that meet the DOT's requirements for monitoring order use by dealer location, total product ordered, and inventory management. Our platform's robust data management tools ensure accurate and timely information is always available to DOT staff. RELYCO can provide individual access to our system based on specific rights as required by the State.

E-Commerce Efficiency

Our e-commerce integration allows for a user-friendly, efficient online ordering system that dealers can access to place orders. This system is backed up by dedicated email and customer service numbers, providing a seamless ordering experience.

Customer-Service

RELYCO's name is derived from the Company you can Rely On. Customer service is what we are all about and we have staff here in NH from 8-5EST Monday-Friday. All calls will be handled by our internal staff and never a call center.

Product Delivery

RELYCO has a strategic relationship with FedEx that allows us to implement custom delivery solutions based on customer's specific needs.

Secure and Reliable

Our e-commerce platform complies with the highest e-commerce security standards, ensuring that all transactions are secure, and that dealer information is protected. This aligns with DOT's need for secure electronic order systems.

Customization and Scalability

Our e-commerce flexibility allows RELYCO to customize the ordering experience to meet the specific needs of the state DOT and the dealers, including setting up unique individual codes under the dealer account as per DOT's requirements. RELYCO will create a custom landing page and shopping experience for the state DOT customer base simplifying the experience and creating a seamless checkout.

RELYCO's use of REVLAR products and its advanced integration with our system and e-commerce platforms provide a comprehensive, secure, and efficient solution for the state DOT's temporary license plate program. The combination of high-quality materials and cutting-edge IT solutions ensures that RELYCO meets and exceeds the DOT's technical specifications and security requirements.

Durable

REVLAR is compliant with material thickness requirements, ensuring robustness and long-term durability. It is strategically designed and trusted to be puncture, tear and water-resistant, making it ideal for use in harsh environments.

Compatible

REVLAR with PrintArmor Pro Coat™ is compatible with both inkjet and laser printers and is engineered to work seamlessly with standard toner used with these printer types. RELYCO will provide two SKUs, one for each type of print technology. This ensures high-quality prints that are resistant to smudging and distortion under various conditions.

Secure

REVLAR offers excellent options for incorporating fraud protection and protecting state revenue. The material can be pre-printed with unique audit numbers in red and it

can include other security features such as holograms, watermarks, thermochromic inks or microtexts to enhance security against tampering, alteration or counterfeiting.

Weather-Proof

The synthetic makeup of REVLAR allows it to repel grease, mud and dirt effectively. It withstands the harshest elements in both hot and cold temperatures (-60 Celsius to 240 Celsius), maintaining its integrity which is critical for vehicle identification and fraud prevention.

Smart Design

REVLAR is designed to be easy to handle, reducing static that is commonly associated with synthetic papers, which facilitates efficient processing and printing when stacked. It is designed to be e-toll compliant.

RELYCO IS YOUR ALL-IN-ONE PARTNER FOR

SECURE DMV SOLUTIONS

We are not just a supplier — we are your partner in navigating the complexities of temporary license plate regulations and security. We have extensive experience with covert and overt physical features such as holograms, watermarks, thermochromic inks or microtext to enhance security against tampering, alteration or counterfeiting.
