## REVLAR SYNTHETIC PAPER

### PFAS TECHNICAL STATEMENT FOR REVLAR® PRODUCTS

RELYCO relies on materials supplied by established manufacturing partners for the production of REVLAR products.

Based on documentation provided by these suppliers, the materials used in the manufacture of REVLAR **do not contain intentionally added PFAS (per- and polyfluoroalkyl substances)**.

The supplier declarations state that PFAS are not intentionally added as raw materials or additives during the manufacture of the materials used to produce REVLAR products.

**A limited number of REVLAR Permanent Label products are an exception to this statement.**

Certain label constructions currently include PFAS in the release liner only. Specific product details are available upon request. These products are expected to be updated with PFAS-free release liners in Q3 2026.

These statements are based on the suppliers' knowledge of:

- The composition of their raw materials
- Additives used in production
- Their manufacturing processes
- Information provided by their upstream suppliers

However, the possibility of ubiquitous traces or impurities cannot be fully excluded, including those that may arise from upstream production processes.

RELYCO does not independently manufacture the base materials used in REVLAR products and therefore **relies on the accuracy of information and declarations provided by its material suppliers.**

This statement reflects the information currently available from those suppliers and will be updated if new information becomes available.
