

TRIDURA Hybrid Paper

TRIDURA is a special hybrid of traditional paper and synthetic paper. Perfect when you want a **durable, tear-resistant paper**, but don't need all of the other characteristics of a fully synthetic paper.

How is TRIDURA Hybrid Paper used?

What can you make with it?

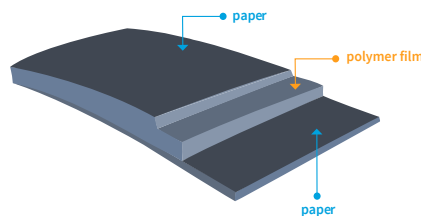

- Take-out menus
- Blueprints
- Placemats
- Event / parking passes
- Manuals
- Medical charts
- Trail maps / city guides
- Point-of-purchase displays
- Signage / posters
- Permits / notices / certificates
- Golf score cards
- Postcards
- Maps / charts
- Race bibs

Specifications

- The same as PaperTyger®
- Opacity: 92% (4 mil)
94% (7 mil & 9 mil)
- Brightness: 92%
- Melting point: 340+ Fahrenheit

Features & benefits

- **Tear-resistant** - durable & resilient combination of traditional paper and synthetic paper
- **Unique construction** - polymer film core sandwiched between layers of paper (paper/polymer/paper)

- **Environmental impact** - white paper layers made of FSC certified papers
- **Image quality** - the appearance, smoothness and printability of standard paper
- **Superior folding** - folds well in either direction and holds a tight fold
- **Compatibility** with laser printers, inkjet printers, HP Indigo printers, offset printers and flexo printers

LASER COMPATIBLE

INKJET COMPATIBLE

HP INDIGO COMPATIBLE

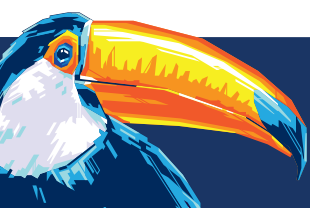

OFFSET COMPATIBLE

FLEXO COMPATIBLE

Storage & printing suggestions

- Store product in unopened and undamaged original packaging
- Keep product dry at all times, store away from concrete floors and walls
- The optimum environmental balance for paper is 74°F and 50% relative humidity
- Allow the unopened paper to acclimate to the printer's room for at least 24 hours prior to printing
- Fan sheets on all edges before loading into the feed drawer in order to reduce static
- Print on the uncoated plain paper setting, if it's not printing well, test different coated paper settings
- Do not guillotine trim sheets prior to imaging - this can cause misfeeds
